

To do our inspection, we need our *Building Codes*.

Building Codes are books that teach us how to build safer buildings and homes.

They tell how to keep buildings from falling down when the wind blows, how to keep buildings from catching on fire, how to keep water out of buildings when it rains, how to keep from falling down stairs, how to make the water safe to drink, how to get out of buildings if there is an emergency, and many more ways to keep people safe in buildings.

As we inspect your house, I will ask you questions from the Building Codes.
